Portfolio: daniel77688.github.io/Portfolio/cv.html

PROFESSIONAL SUMMARY

Computer Engineer specializing in software development and the integration of data and Artificial Intelligence solutions. Experience in database optimization, enterprise application development on low-code platforms, and the practical application of RAG and LLM architecture. Analytical, autonomous, and a quick learner.

PROFESSIONAL EXPERIENCE

- Appian & Low-Code Developer** - Indra Minsait, Madrid July 2026 - Present
 - Application development and maintenance using Appian.
 - Participation in design and development of interfaces, data models, record types, business rules and queries, as well as in the integration and management of information.
 - Following development best practices and agile methodologies, and collaborating with the team to resolve issues and evolve applications.
- Backend Developer Intern** - Mundomar Cruceros, Madrid (*Letter of recommendation*) September 2025 - April 2026
 - I transitioned from corporate data modeling to the backend engineering team over the course of my curricular and extracurricular internships..
 - I developed and optimized corporate KPIs and operational reports in MyDBR based on multi-instance MySQL databases.
 - I refactored the company's core search engine in Java, introducing grouping, filter virtualization, and new DTO layers.
 - I optimized dynamic SQL queries by isolating subqueries and avoiding data collisions, achieving execution time reductions of up to 93%.
 - I participated in the QA cycle (endpoint testing and debugging production issues) using the Scrum methodology.

FEATURED PROJECTS

- Intelligent Tutor Recommendation System (Bachelor's Thesis)** Grade: 9,5/10
Python | LangChain | ChromaDB | FastAPI
 - Academic recommendation platform with RAG architecture: it combines semantic search over vector embeddings with an LLM-based conversational assistant to help students find a tutor and a topic for their bachelor's thesis.
 - Backend using FastAPI and a Python data pipeline; custom frontend with role-based authentication and streaming chat.
- NOISE: AI-Powered Creative Degradation Platform IBM**
Python | FastAPI | LangChain | Ollama
 - A creative writing tool that applies controlled, irreversible degradation to language model outputs, endowing the generated content with a unique, inimitable human signature.
 - Developed for the IBM AI Builders Challenge (Creative Industries category), using locally run LLM models (Ollama + IBM Granite) to avoid dependencies on external APIs.

- Padel Management Application**
Java 21 | Spring Boot | JPA | REST API | H2 | JavaScript
 - Full-stack application with layered architecture, tournament registration management, and real-time state control.
 - Implementation of full CRUD and data persistence using JPA and relationships.

TECHNICAL SKILLS

- Languages:** Java, SQL, Python, C, C++
- Frameworks and libraries:** Spring Boot, Spring Data JPA, LangChain, JUnit, Mockito
- Databases:** MySQL, MongoDB, SQLite, ChromaDB
- DevOps y Cloud:** Git, GitHub, Docker, Microsoft Azure, CI/CD, Linux
- AI and data:** RAG, embeddings vectoriales, Pandas, integración de LLM
- Methodologies:** Scrum, TDD, SOLID, Code Review, Jira

EDUCATION

- Bachelor's Degree in Computer Engineering**
Rey Juan Carlos University, Madrid · 2022 – 2026

LANGUAGES

- Spanish:** Native
- English:** Advanced
